RE: Los Angeles Department of Water and Power's Decision to Dewater Mono County Environment and Ranchlands

Honorable Mayor Garcetti:

The Town of Mammoth Lakes is aware of the ongoing discussions between Los Angeles Department of Water and Power (LADWP) and the Mono County Board of Supervisors (Board) regarding the diversion and export of water from wetland, ranch, and meadow areas in Mono County. It is the Town's understanding that LADWP has also indicated its long-term plans to further (and permanently) reduce the amount of water supplied to these lands, following environmental review under CEQA. On Tuesday, August 7, Town staff attended a meeting of the Board at which this item was discussed. Over 100 people ranging from private citizens to environmental groups and non-profits to other government entities, including Bureau of Land Management and the local Paiute tribe, spoke and provided comments in opposition to this practice.

The LADWP actions have significant potential economic and environmental impacts to the entire Eastern Sierra region, including the Town of Mammoth Lakes. As you are aware, the majority of our tourism comes from Southern California, including Los Angeles County. The Town sees millions of visitors each year who come to Mammoth Lakes and the Eastern Sierra to enjoy our abundant and beautiful natural resources and outdoor recreation opportunities. Current observations show that LADWP's current diversion and export of water from 6,400 acres of wetland and meadow areas in Long Valley and Little Round Valley is already having negative impacts on sensitive species, including the Bi-State Sage Grouse and habitat crucial to its survival. It is also significantly impacting the recreational and agricultural economy of the Eastern Sierra region.

The Town is extremely concerned that environmental analysis has not been completed prior to changing historical practices with regards to how water is managed throughout lands in Mono County. Without conducting a proper environmental impact analysis prior to its decision, there is no way to conclude that LADWP's actions are not an immediate threat to the environment. The Town is concerned that irreversible damage may have already occurred. Until sufficient

environmental analysis can be conducted, the Town strongly urges LADWP to reevaluate the current water allotment for this year and allow more water to be used locally in order to prevent additional lands from drying up and turning brown.

The Town appreciates LADWP's concerns regarding climate change. As a resort community that relies heavily on winter visitation and snowfall, we understand firsthand how critical addressing potential impacts from climate change is. However, climate change is a complex issue, and simply reducing local water usage and diverting water out of this area is not a viable solution. In fact, it exacerbates the effects of climate change by eliminating wetlands habitat, which helps to reduce CO2 from the environment. In depth analysis needs to be conducted in order to determine actual water needs and to assess those against snowpack and anticipated runoff in any given year.

The Town of Mammoth Lakes strongly urges you to immediately deliver water to Mono County lands, and to not implement any future water diversions until a complete and thorough CEQA analysis has been completed.

Sincerely,

V. Cleland Hoff
Mayor
