A Message from Tom Boo, MD, Mono County Public Health Officer

Hantavirus Reminder: Protect Yourself and Your Family

Almost a year ago, three Mammoth Lakes residents died of Hantavirus, which people catch from exposure to indoor mice. Hantavirus is most common in warmer months but can occur in any season. To reduce the chances of catching this dangerous virus, it is worth remembering to take simple precautions when you have to deal with a mouse infestation in indoor spaces, and to try to prevent mouse invasions in the first place.
